TO ALL BIDDERS:

Addendum forms are a part of and modify the bidding requirements and Request for Proposal for the subject Project

ADDENDUM 1

There has been a change to the design of this project. The revised scope will consist of removing the existing concrete walking path and constructing a new concrete walking path along the west side of the building. A retaining wall with drainage will also be constructed along the entire length of the building.

The purpose of this design change is to allow the contaminated soil generated by the project to be placed and contained in the area between the new retaining wall and Liberty Street. This approach is intended to eliminate the need to transport and dispose of most of the soil off-site. Updated soil quantities will be provided as part of the revised project information.

The revised design documents will be posted, and the bid submission deadline will be extended accordingly.
